DETAILED ACTION

This office action is in response to applicants' communication filed on 10/12/06.

Claims 1, 6-9, 11 and 13-22 are pending in this application. Claims 2-5, 10 and 12 have been canceled.

Claims 13-15 are withdrawn from the consideration, being drawn to the non elected invention.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

This claim refers to "a product to claim from 1", whereas, claim 1 is simply drawn to the compound claim, and not to a product claim(product claim is a product derived from a reaction), thus rendering the claim indefinite.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1621

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1, 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Golborn et al.

Golborn et al teach structurally similar compounds as claimed herein. See for example, column 4, lines 50-60, column 3, lines 20-25, wherein, X can be alkyl, m can be 2-4, see column 1, lines 23-24.

It would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made to obtain compounds within the generic disclosure of the reference, because they are structurally so similar to these claimed herein, with the

Art Unit: 1621

reasonable expectation of achieving compounds for making flame retardants, absent evidence to the contrary.

7. Claims 16-22 are again rejected under 35 U.S.C. 103(a) as being unpatentable over DE 3824 961 or Branchaud et al, all for the reasons of record.

Applicants' arguments were fully considered and were not found convincing. Applicants submit that the references do not teach naphthalene or biphenyl group or n different from 0, or neither the compounds of the references have same properties as claimed herein.

At the outset, instant claims are drawn to an analogous process whereby, N-hydroxymethyl benzamide is produced by reacting benzamide with formaldehyde in slightly basic medium. Inasmuch as the process is analogous, one of ordinary skill in the art would have started with carboxamide substituted compound with formaldehyde to obtain, multiple CONH-CH₂OH groups, because the process is analogous.

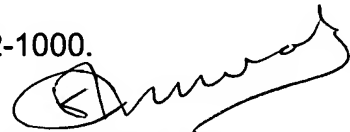

8. Claims 6-7 are free of prior art and are allowable.
